Table of Contents

1. Executive Summary

Key Metrics, Critical Issues & Quick Wins

2. Audit Categories

What Works

Findings by Severity

3. Action Plan

Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **vantoplayer.com** for a **SaaS / Software** site, generated on October 08, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

60/100

SEO HEALTH SCORE

Critical Issues Found:

1. **Info:** Contradictory claims: Free vs. Paid, EPG availability, and live vs. coming soon platforms
2. **Info:** Trust & Security: APK hosted on unbranded URL without version/hash metadata
3. **Info:** Content Cannibalization: 26 scaled blog posts published rapidly with overlapping topics and no author
4. **Info:** Image Performance: next/image missing sizes prop, causing LCP bloat

Quick Wins:

1. Add X-Content-Type-Options: nosniff in next.config.ts
2. Fix duplicated brand names on blog titles and set og:type='article'
3. Remove dead 'Become a Reseller' CTA and unsubstantiated claims

2. Audit Categories

2.1 Technical SEO

Score: **85/100**

What Works

- Verified: robots.txt, sitemap.xml, canonicals, HTTPS redirects
- HTML lang attribute correctly set to 'en'

Findings

Missing Security Headers **Low**

Missing X-Content-Type-Options header.

Recommendation: Add this header in next.config.ts.

Nested Anchor Bug **Medium**

HTML nested-anchor bug detected in the Smarters article.

Recommendation: Fix the nested anchor structure to ensure valid HTML.

2.2 Content Quality

Score: **40/100**

What Works

- Good initial text volume on the homepage

Findings

UX & Messaging Contradictions **Critical**

Contradictory claims regarding pricing (free vs 7-day trial), EPG features, and platform availability.

Recommendation: Harmonize messaging and publish a clear pricing page.

Scaled Content Issues **High**

Blog contains 26 quickly published, overlapping posts with no named author or bio.

Recommendation: Consolidate overlapping posts into pillar pages and add author profiles.

2.3 Trust & Security

Score: **45/100**

What Works

- HTTPS enforced with HSTS header

Findings

Unbranded APK Hosting **High**

The Android APK is served from a generic r2.dev bucket instead of a branded domain.

Recommendation: Move APK to downloads.vantoplayer.com and display version/SHA-256 metadata.

2.4 Images & Performance

Score: **60/100**

What Works

- Lazy loading is correctly implemented on most below-fold images

Findings

Missing sizes Prop **Medium**

w=3840 image URLs point to a missing sizes prop, increasing LCP and page weight.

Recommendation: Ensure sizes prop is configured on next/image elements.

3. Action Plan

Phase 1: Critical Fixes Week 1

- Resolve free vs. paid contradictions
- Clarify EPG and platform availability

Phase 2: High-Impact Improvements Weeks 2-3

- Move APK to branded domain with metadata
- Fix next/image sizes prop and nested-anchor bug

Phase 3: Content & Authority Month 2

- Consolidate 26 overlapping blog posts into pillar pages
- Add author profiles

Phase 4: Monitoring & Iteration Ongoing

- Monitor Search Console for correct indexation of consolidated blog content

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)
